

- Frequently touched surfaces will be routinely cleaned and disinfected. This may include cleaning objects/surfaces not ordinarily cleaned daily (e.g., doorknobs, light switches, classroom sink handles, countertops), as well as more frequent (three times daily based on usage) cleaning of restrooms and high traffic areas.
- When appropriate, the GenEon electrolyte mist sprayer will be used appropriately to disinfect hard, non-porous surfaces.

Staying Home and Staying Safe

- **Fully Vaccinated:** an individual is considered fully vaccinated 2 weeks after the second dose in a 2-dose vaccine series or 2 weeks after a single dose vaccine. Fully vaccinated individuals do not need to quarantine if in close contact with a COVID-19 positive individual. **Isolation:** is for individuals who have COVID-19 symptoms (see chart) or tested positive for COVID-19 (asymptomatic individuals also). These individuals will stay home at least 10 days from the start of symptoms or the date of their positive test if asymptomatic.
- Google Classroom will be utilized for daily synchronous instruction through Swivls (cameras for streaming classroom instruction).

If a student has COVID-19 symptoms there are three options:

- **Option #1:** The symptomatic student will need to isolate along with all same household siblings in the district for 5 days unless the siblings have opted-in to screening testing.
- **Option #2:** If the symptomatic student is tested at one of the testing sites (there will be sites in district for parents to bring students), and the student test is negative, the siblings will not have to remain home in isolation. Home tests are also accepted. Symptomatic student can return after being 24-hour fever free (without fever reducing medicine) and symptoms have subsided.
- **Option #3:** Symptomatic student can receive alternate diagnosis from medical doctor to be released to return to school.
- **If a student tests positive for COVID-19, the following steps will be followed:**
 - The parent/guardian will receive a Notification of Student Having COVID-19 Symptoms OR Student Positive COVID-19 Letter notifying them of the exclusion period start and end date.
 - Students may return to school following the 5-day exclusion period if the student is fever free without fever reducing medication for 24 hours and other symptoms of COVID-19 are improving.
 - Students who test positive for COVID-19 MUST provide a Release from Isolation Letter from the public health department to the school nurse in order to return to school.
 - The parent/guardians of students who have been in close contact with a COVID-19 individual will receive notification of close contact with quarantine start and end dates.
 - Guidance from the public health department will be provided recommending that their child see a health care provider and be tested for COVID-19.

- **Quarantine: The local health department will make the final determination on who is to be quarantined and for how long. They also may determine that a close contact is not a candidate for modified quarantine due to a high-risk exposure (e.g., sustained close contact without masking).**

A. Confirmed OR Probable COVID-19 case

- a. Isolate at home for at least 5 calendar days from onset of symptoms. Date of last exposure is considered day 0.
- b. The individual may end isolation after 5 calendar days and return to school if symptoms are improving AND the individual is 24 hours fever free (without fever reducing medications).

B. Symptomatic Individual with Negative COVID-19 Diagnostic Test

- a. Isolate at home for 5 calendar days until symptoms are improving AND the individual is 24 hours fever free (without fever reducing medications).
 - i. Individuals must test negative within 48 hours of onset of symptoms to return to school sooner than the 5 calendar day isolation period.
 - ii. Home tests are allowed.

C. Symptomatic Individual without Negative COVID-19 Diagnostic Test

- a. Isolate at home for at least 5 calendar days from onset of symptoms.
- b. The individual may end isolation after 5 calendar days and return to school if symptoms are improving AND the individual is 24 hours fever free (without fever reducing medications).

D. Asymptomatic Individual who is Close Contact to Confirmed Probable

- a. Quarantine for 5 calendar days after last exposure to the COVID-19 case.
 - i. Individuals who have had diagnoses of COVID-19 confirmed within 90 days do not need to quarantine for 5 calendar days. (Must show proof of the positive COVID test result).
 - ii. If the individual develops symptoms, they must observe the 5 day quarantine period OR obtain a negative test. (Home tests are allowed).
 - iii. Individuals who are up to date with COVID-19 vaccinations do not need to isolate after exposure unless they develop symptoms.

indoors at school, regardless of the mask policy at school.

- However, if the close contact is identified five days or more from the date of exposure, adjust testing accordingly, ideally on days five and seven after the last exposure.
- When testing in the outlined cadence is not possible due to weekends and holidays, students should be tested at the earliest possible opportunity.
- At the conclusion of the Test-to-Stay modified quarantine period, the school should notify the local health department that the student has successfully completed testing and remained negative.
- Local health departments have the authority to assess high-risk exposures and order a traditional quarantine without the option for Test-to-Stay.
- If at any time the student tests positive or becomes symptomatic, they should be immediately isolated and sent home, and the local health department notified.

*****Note the guidance is subject to change.***

Symptoms of Coronavirus (COVID-19)

Know the symptoms of COVID-19, which can include the following:

Symptoms can range from mild to severe illness, and appear 2–14 days after you are exposed to the virus that causes COVID-19.

Seek medical care immediately if someone has Emergency Warning Signs of COVID-19

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion
- Inability to wake or stay awake
- Pale, gray, or blue-colored skin, lips, or nail beds, depending on skin tone

This list is not all possible symptoms. Please call your healthcare provider for any other symptoms that are severe or concerning to you.
